## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1, 4-6, 8-10, 13-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bergsbaken et al in view of Ruben. The patent to Bergsbaken et al teaches structure substantially as claimed including a cover(10), made of a non woven material (columns 3, lines 63-67, column 4, lines 10-13), folds and side drops, connection structure including adhesives, bonding (column 4, lines 46-55) the only difference being that the connection structure is a separate piece of material. However, the patent to Ruben teaches the use of providing a folded cover with attaching structure as a unitary one piece member. It would have been obvious at the time of the invention to modify the structure of Bergsbaken et al to include a cover of a unitary construction, as taught by Ruben since such structures are conventional alternative structures used

in the same intended purpose, thereby providing structure as claimed. The methods would have been obvious in view of the structures. It is noted that Bergsbaken et al teaches the use of permanent joining through conventional structures including taping, sewing, gluing, heat seaming, ultra-sonic bonding. It is repeated that with respect to the amendments to the claims, it is unclear how the expression "where the free edges of the plurality of side drops and the plurality of pre-fitted corners together define a generally polygonal contour having a shape and dimension substantially identical to a shape and dimensions of the generally polygonal contour of the top cover" define structure other than that of the references used and therefore the preceding rejections are again made. Applicant discusses the shape and dimensions causing the film to be fitted about the sides of a tabletop to hold the cover. It is suggested that the applicant better define the "holding structure".

### ***Response to Arguments***

Applicant's arguments filed 05/19/08 have been fully considered but they are not persuasive. See remarks above in the rejections.

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
